

# Transportation Bureau and Commercial Bureau Headquarters

Ningbo, Zhejiang Province, China  
Competition Entry, August 2005

Lead Designer

This pair of office buildings houses two government bureaus as well as commercial tenants. The project satisfies building cost requirements while concurrently meeting LEED certification requirements. The design features two towers that share a similar base but twist away in opposite directions. Recreation areas are embedded in the building's surface. The green and blue pattern on the building's surface evokes the local landscape, which is itself a grid of canals and farms.
